FIREPROOF MATERIALS

SF-120

Water-based intumescent coating

CONCEPT TECHNICAL DATA SHEET / DEMO VERSION 1.0

A water-based intumescent concept for interior steelwork. Designed to form an insulating char layer when exposed to heat, with a clean architectural finish.

Fire resistance (illustrative)	120 min
Dry film thickness (illustrative)	1.5–3.0 mm
Density (illustrative)	1.35 ± 0.10 g/cm^3
Consumption (illustrative)	2.0–4.0 kg/m^2
Finish	Matt white / Custom

IMPORTANT NOTES

This is a website concept document, not an official manufacturer data sheet. All performance figures are fictional examples, not certification, compliance evidence or engineering commitments.

Fire resistance and film thickness are not directly interchangeable. Actual specification requires valid test reports, applicable standards, section factors, substrate, exposure and project design.

Obtain official application instructions and safety data sheets before use. Verify the complete primer, fire coating and topcoat system.

Product images are original concept packaging illustrations. Verify and replace brand, packaging and data before public launch.
